Profile

I am an early-career software engineer with hands-on experience in full-stack development, cloud-ready applications, automation, AI/ML, and data-driven systems. I enjoy solving real business problems, learning quickly, and building practical solutions that create measurable impact. Through internships and projects across startups, cybersecurity, IoT, fintech, and healthcare, I have developed strong technical skills, ownership, and adaptability, making me ready to contribute effectively.

Education

The University of Queensland

Master of Software Engineering (Professional), GPA: 5.85/7

Expected Jun 2026

Brisbane, Australia

Thapar Institute of Engineering and Technology

Bachelor of Engineering in Computer Science, GPA: 8.71/10

2020 – 2024

India

Technical Skills

Languages: C++, C#, Python, JavaScript, TypeScript, SQL, Swift

Frameworks: React, FastAPI, Node.js, Express, REST APIs, MongoDB, Spark, Tailwind CSS

Cloud/DevOps/Tools: Docker, Terraform, AWS, GitHub Actions, Git, Xcode, Visual Studio, MLflow, DVC

Focus Areas: Full-stack development, cloud-ready systems, automation, testing, data-driven applications

Soft Skills: Observant, Problem Solving, Leadership, Interpersonal Communication, Time Management

Experience

Admin and Logistics Assistant | Orana Car and Truck Rentals, Australia

Mar 2025 - Apr 2026

- Utilised internal systems to manage fleet logistics, track vehicle availability, and update rental databases.
- Streamlined administrative workflows through accurate data entry, digital record-keeping, and scheduling tools.
- Coordinated with operations teams to optimise dispatch timing and improve service efficiency.

Software Engineer (Product) | Jobro, Shenzhen, China

Nov 2025 – Dec 2025

- Delivered full-stack product features across frontend, backend, authentication, and data workflows within a 4-week startup internship, reducing handoff friction by owning features from requirement clarification to production debugging.
- Built an iOS swipe-based job application flow using Supabase authentication and persistent user data storage, improving job discovery efficiency and supporting product usage across 1,000+ active users.
- Developed an AI-assisted job-ad scraping and extraction workflow for the internal operations team, reducing manual job posting effort by approximately **80%**, from 10–15 minutes to 2–3 minutes per job.

Cybersecurity Researcher | UQ Cyber – Detack, Brisbane, Australia

Feb 2025 – Nov 2025

- Assessed Detack's EPAS password auditing system across password analytics, policy enforcement, and compliance workflows, improving visibility into enterprise password risk and audit readiness.
- Analysed authentication weaknesses, password exposure risks, and breach case studies, mapping findings to APP 11, GDPR, and ISO 27001-style controls to strengthen compliance-focused security reporting.
- Built proof-of-concept artefacts and reporting material that translated technical password-auditing results into business-readable risk insights, reducing the gap between security analysis and stakeholder decision-making.

Software Engineering Intern | Concept Robotics and Automation, India

Jan 2024 – Jun 2024

- Developed an IoT-based machine monitoring and automated data collection system, reducing reliance on manual machine-status tracking and improving real-time production visibility.
- Built a real-time dashboard and backend server using React, Node.js, Express, and MongoDB, centralising machine data capture, storage, visualisation, and management for operational teams.
- Integrated frontend, backend, database, and sensor-driven workflows into an end-to-end industrial monitoring system, improving the reliability and accessibility of machine performance data.

Data Science Intern | Celebal Technologies, India

Jun 2023 – Aug 2023

- Built data analysis and modelling workflows on an FMCG sales dataset, applying extraction, transformation, feature analysis, and classification techniques to generate business insights.
- Implemented SVM, KNN, and Naive Bayes models and presented findings to stakeholders, receiving a Silver Badge for internship performance.

Projects

SpendSmart – Full-Stack Cloud Expense Tracking Platform | [GitHub](#)

- Built a React/FastAPI expense platform with Docker, Terraform, and AWS, supporting **5+ workflows** including CRUD, filtering, budgeting, shared expenses, and user profile management.
- Implemented Cognito authentication, role-based access control, budget alerts, and collaborator-based sharing, securing private financial data across **multiple user roles**.
- Designed containerised cloud deployment with infrastructure-as-code, improving repeatability across local, test, and AWS environments.

Kidney Disease Classification – Deep Learning and MLOps | [GitHub](#)

- Built an end-to-end CNN-based kidney disease classification pipeline with MLflow and DVC, enabling **100% reproducible** training, evaluation, and model versioning workflows.
- Automated data ingestion, preprocessing, training, and evaluation through modular ML components, reducing manual experiment setup and improving traceability across model runs.
- Containerised the model with Docker and implemented CI/CD workflows on AWS, making cloud-based predictions easier to deploy, test, and maintain.

Money-Mentor – Investment Learning Platform | [Link](#)

- Developed an interactive financial literacy platform with multilingual support, investment insights, personalised tips, and automated real-time market data scraping.
- Implemented an LSTM forecasting model trained on **5 years** of historical data from **25+ stocks**, generating stock predictions up to **30 days** ahead.

Sarvogya – Patient Management System | [GitHub](#)

- Built a healthcare web app predicting patient admission urgency and length of stay with **79%** and **67%** accuracy using Random Forest and regression models.
- Automated medical report extraction using PDFQuery-based PDF scraping, reducing manual data entry effort and improving patient record processing speed.
- Secured patient records using a local Ethereum blockchain with Solidity, Truffle, Ganache, and Node.js, improving transparency, immutability, and auditability of medical transactions.

Sintrest – Social Media Application | [Link](#)

- Developed a full-stack social media application using React, Tailwind CSS, Google Authentication, and Sanity.io APIs, enabling users to create, save, delete, and comment on posts.

Courses and Certifications

UQ Ventures Curiosity Program – The University of Queensland

Mathematics for Machine Learning – Imperial College London, Coursera

Accelerated Computer Science Fundamentals – University of Illinois, Coursera

Full Stack Web Development with NodeJS – Coding Blocks

Leadership & Involvement

Young Tech Ambassador – Australian Computing Society

Motivate school students to explore technology careers and pathways into software engineering.

Present

Brisbane

Sports and Well-being Officer – Association of Postgraduate Students

Organised postgraduate community events and supported student engagement at The University of Queensland.

2025

Brisbane

Volunteer – YOW! Conferences

Supported technical events and engaged with speakers, software engineers, and conference attendees.

2025

Brisbane
